# Curus Software Engineer Assignment

Create a basic mobile application on **Flutter** with following features:

1. Create a list view of patients with provided mock data
   a. Patient Image should be shown in left
   b. Followed by Name in bold with Mr/Ms according to gender field
   c. Description 30 characters below the name
2. Integrate Google Speech To Text API in the app
   a. By pressing any button in the app, we should be able to convert our speech into text on the app screen.

You can create an app built in android and send the apk through mail along with a code link.

Thank you.
